

WellStar Kennestone Comprehensive Stroke Center

2022 Interventions and Outcomes

Wellstar Kennestone Comprehensive Stroke Center

Wellstar Kennestone is a Joint Commission Advanced Certified Comprehensive Stroke Center (CSC) since 2015.

We provide the following:

- ✓ **24/7 state of the art stroke care**
- ✓ Cerebrovascular Endovascular Neurosurgeons
- ✓ Neuro Interventionalist
- ✓ Vascular Neurologist
- ✓ Accepting Center for Stroke transfers
- ✓ Neuro Intensivist
- ✓ Reperfusion therapies (i.e., Thrombectomy, IV Thrombolytics)
- ✓ Designated Neuro Units to include a Neuro Intensive Care Unit
- ✓ Research Participation
- ✓ Acute Care Rehab Services
- ✓ Inpatient Rehabilitation Unit
- ✓ 24/7 MRI with staff Neuro Radiologist
- ✓ Vascular Surgery
- ✓ Trending of performance measures and performance improvement initiatives to improve patient care

Wellstar Kennestone

- Wellstar Kennestone's Comprehensive Stroke Center has received the highest award possible from the American Heart Association for 6 consecutive years and is a US News Report and World Report *High Performing in Stroke* Hospital.

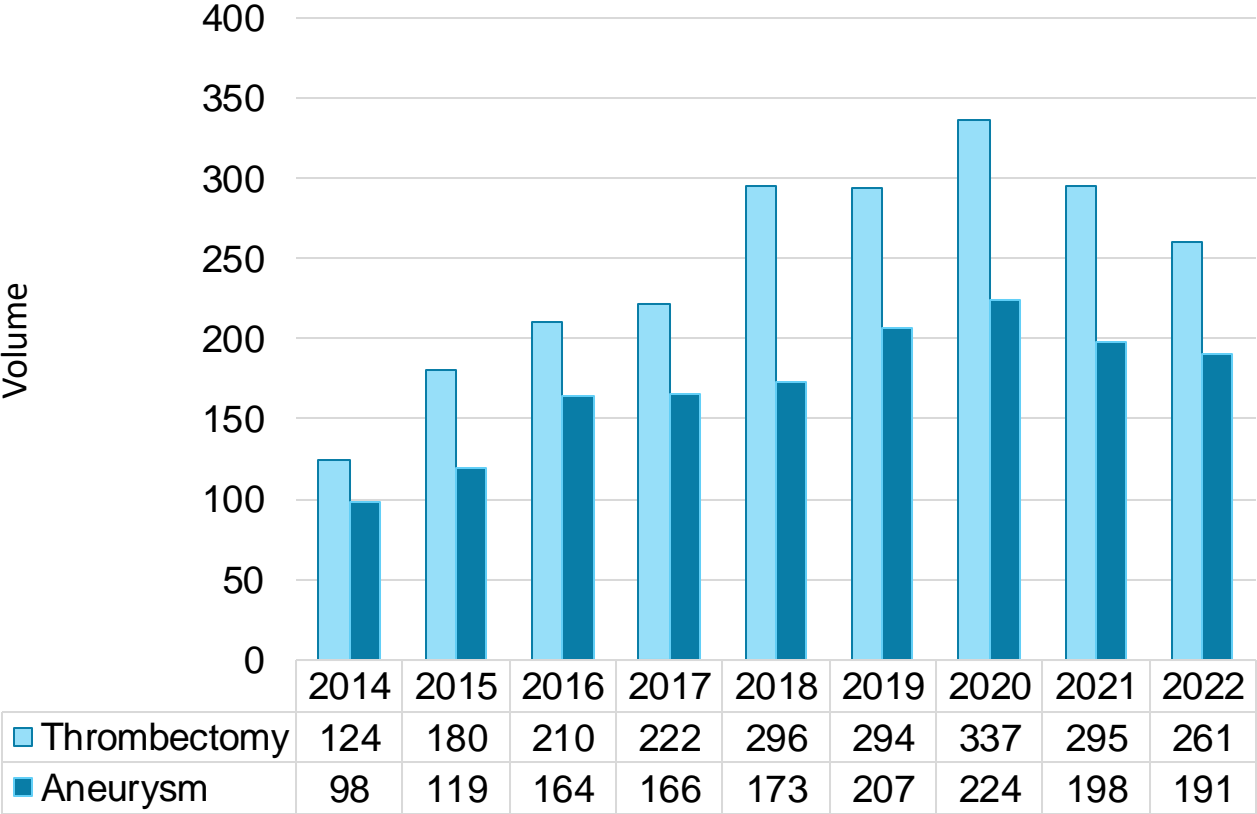

Wellstar Kennestone Neurovascular Diagnostic & Intervention Cases

- As a Joint Commission Advanced Certified Comprehensive Stroke Center, WellStar Kennestone’s annual case volumes for neurovascular interventions and diagnostics has exceeded **1000** cases each year since 2015.

- Interventions performed include:
 - Cerebral Angiograms
 - Cerebrovascular Stenting including Intracranial Stenting
 - Carotid Angioplasty
 - Treatment of Ruptured and Unruptured Cerebral Aneurysms
 - Thrombectomy for Ischemic Strokes
 - Carotid Endarterectomy

WS Kennestone Endovascular Treatments: Thrombectomy & Aneurysm Volumes

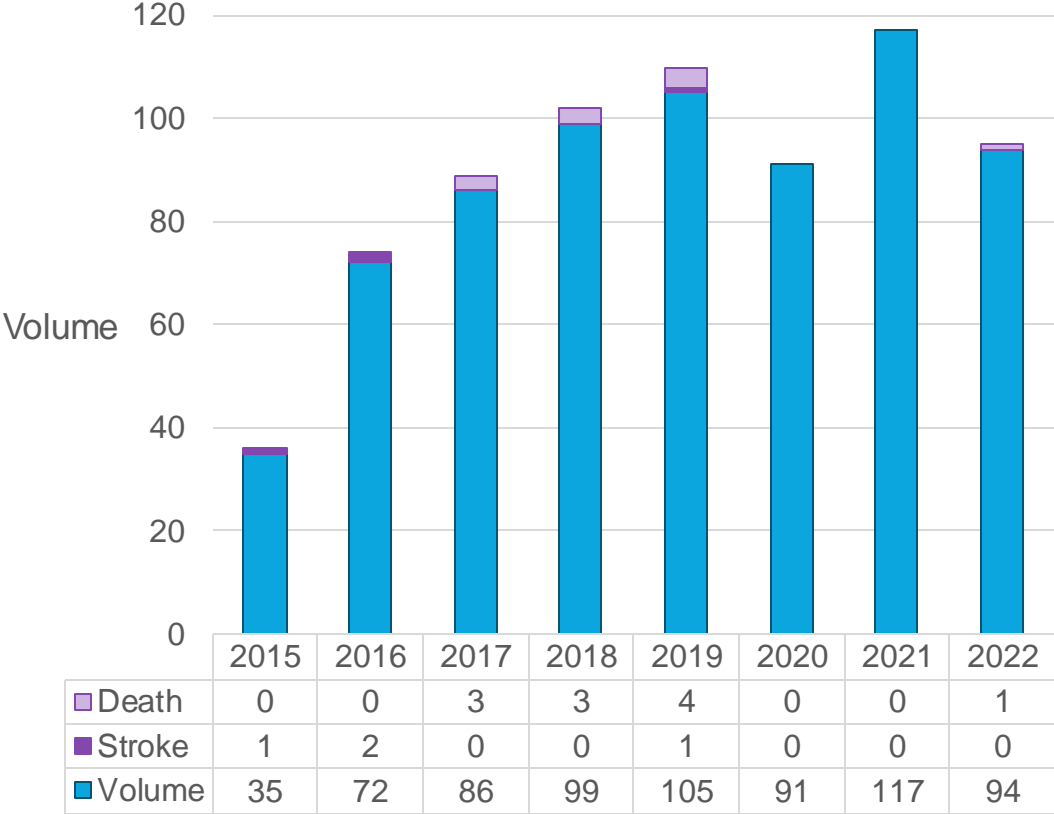

- An endovascular treatment is a less invasive procedure used to treat problems affecting the blood vessels, such as an aneurysm, which is a swelling or ballooning of a blood vessel in the brain.
- If you have an ischemic stroke (stroke caused by a blocked artery in your brain), doctors may be able to perform an endovascular procedure called a thrombectomy to remove the clot.

WS Kennestone: Endovascular Treatment of Cerebral (Brain) Aneurysms

- A brain aneurysm is a weak area in a blood vessel that usually enlarges.
- It's often described as a ballooning of the blood vessel.
- Approximately 1 in 50 people in the United States have an unruptured brain aneurysm.
- Most brain aneurysms do not produce symptoms.
- An aneurysm may rupture causing a hemorrhagic stroke.
- Depending on the aneurysm's size, location, and shape, it may be treatable from inside the blood vessel.

WellStar Kennestone: Carotid & Vertebral Artery Stents & Angioplasty Volumes & Complications within 30- Days Post Procedure

- Cerebrovascular Stenting: Carotid and vertebral angioplasty and stenting are procedures that *open narrowed arteries* to restore blood flow to the brain.
- Angioplasty and stenting are often performed to *treat or prevent a stroke*.
- The carotid arteries are located on each side of your neck. These are the main arteries that supply blood to your brain.
- The vertebral arteries run through the spinal column and supply blood to the brain and spine.

Wellstar Kennestone: 2022 Carotid Endarterectomy Volumes & Complications within 30-Days Post Procedure

CEAs performed = 138

A carotid endarterectomy (CEA) is a surgical procedure used to *reduce the risk of stroke* by correcting narrowing in the common carotid artery or internal carotid artery. Endarterectomy is the removal of material on the inside of an artery.
